

Instructions: - 3pc Arch Set

Tools Required:

- Medium sized flathead screwdriver or round file to file any metal shards.
- Small step if you plan to build the arch standing,

NOTE: Parts may be hard to get together the first time due to the paint coating and occasional metal left in tubes from the manufacturing process.

Each Set Should Contain the following parts, please check the parts as sometimes there may be a packing mistake by our factory.

Large Arch	Small Arch (1 part kit for each arch)
2 x Part to form base	1 x base
2 x Straight parts with Female and Male Connector	2 x Straight part with Female and Male Connector
2 x Straight part with Female connectors	1 x Straight part with Female connectors
1 x Curved part with Female connectors	1 x Curved part with Tpiece
2x Curved part with Male and Female Connectors	1 x Curved part with Male and Female Connectors

1. Unpack all parts and layout on the floor in the order shown in the photo below. Each plastic bag contains the contents for one arch. The larger heavier bag has the parts for the larger arch, smaller bags are identical in contents for the smaller arches.

2. 2 x bases will be complete on unpacking the other larger base will need putting together and the wing nuts tightening.
3. On each arch insert a straight part with a male female connector onto the base plates and tighten up the wing nuts.
4. On the large arch insert the straight female female part onto the male straight part already attached to the base plate.
5. On the smaller arches attach one straight female female part into opposite sides
6. On the larger arch insert each of the parts with male female connectors into the top of the arch, complete the arch with the female female part.

7. Inset the curved parts with the tpiece onto the tallest side of the smaller arches.
8. Connect with the remaining curved part
9. Tighten all wingnuts
